

GREASE COPPER THREAD GREASE

Copper Thread Grease is a unique multi-purpose anti-seize compound designed to provide protection against corrosion and metal-to-metal contact in trenchless, particularly where very high temperatures are encountered. It is effective up to 800 °C due to the high copper content.

Advantages:

- Protection against seizure due to temperature and corrosion
- Variety of anti-seize applications
- Excellent mechanical stability
- Excellent resistance to water washout
- Effective in harsh acid, alkaline and salt conditions
- Outstanding storage stability

Recommended Treatment:

Copper Thread Grease is recommended specifically for trenchless drilling operations but is also suitable as an anti-seize grease or lubricant in various applications where such a product is beneficial, for example very high temperatures, high loads or where corrosion, water ingress or sealing present problems.
