

CX-WELL CLEAN

CX-WELLCLEAN is used in the development and cleanup of water wells where bentonite-based mud has been used

Advantages:

CX-WELLCLEAN breaks down the viscosity of a bentonite mud and will destroy any wall cake that has formed on the walls of the drill hole, promoting rapid and effective cleanup. After the well screens have been run and set, jetting and surging with CX WELLCLEAN and or a water mix will promote rapid, deep penetration of the aquifer and assist the well clean up

Recommended Treatment:

3-5 kg per 1000 litres to clean water for jetting/surging through the screens or gravel pack.
