

Fluids Loss Control FIL

FIL is a premium grade purified low viscosity, water soluble polymer, designed to control fluid loss while causes minimal increase in viscosity in water-based drilling fluids.

Advantages:

- Effective in fresh water, salt water, and brine-based fluids
- Controls fluid loss
- Inhibits hydratable, swelling shale
- Environmentally compatible
- Does not require a bactericide

Recommended Treatment:

Add FIL in concentration of 2.0 to 5.5 kg/m³ (0.7 to 1.9 lb/bbl) to any system.
Mix slowly through a jet mixer or sift slowly into the vortex of a high-speed stirrer.
